EDUCATION

Doctor of Philosophy - California Institute of Technology, Pasadena — Defense Date: Dec 11th, 2023
Option: Applied Physics — Graduation: June 2024
Thesis: Quantum Measurements with SNSPDs
Caltech Advisor: Maria Spiropulu
JPL Advisor: Matthew Shaw

Bachelor of Science - University of California, San Diego
Major: Physics — Graduation: March 2017
Minor: Engineering Mechanics — GPA: 3.803

AWARDS AND FELLOWSHIPS

Phi Beta Kappa Society (May 2015)
Rose Hills Fellowship (Sept 2017)
Brinson Foundation Fellow (Sept 2020)

EXPERIENCE & PUBLICATIONS

Postdoctoral Scholar, JPL Microdevices Group, SNSPD subgroup — Jan 2026 – Present
Projects:

- Research and development of high-density interconnects for SNSPD readout
  - Study cable heat load, crosstalk, model attenuation
  - High density polyimide stripline flex cable modelling
- Cabling test & measurement for DARPA-funded microwire array cryostat
- Lab-wide rewrite of measurement software emphasizing remote access and AI-assisted automation patterns.
- Automation and remote control of photon count rate measurements in a mid-IR SNSPD measurement testbed
- Co-corresponding author on 2 forthcoming mid-IR SNSPD papers

Postdoctoral Scholar, INQNET under Prof. Maria Spiropulu, Caltech — March 2024 – Dec. 2025
Projects:

- Test & measurement of mid-infrared SNSPDs for dark matter searches
  - Hardware and software development of a cryogenic RF switch. Increased measurement velocity for mid-IR SNSPDs by 8x
  - Design and testing of a light-tight SNSPD measurement package with removable Leadless Chip Carrier (LCC), dramatically decreasing wire-bonding and device installation time.
- Modelling of cavity-enhanced waveguide coupled ppKTP pair generating crystal for multiplexed quantum networks
- Installation and testing of near-infrared differential single pixel SNSPDs, manufacture of amplifier readout boxes
- Software and hardware development for the Device Bay electronics platform

Graduate Student, JPL Microdevices Laboratory; INQNET program Sept 2018 – Dec. 2023

- Non-published projects
  - Packaging, building, and testing of low jitter photon-number-resolving 1550nm SNSPDs for quantum networks. Fiber splicing, device packaging, building readout electronics

Recent Publications (2020 – Present):

Sinclair, and M. Spiropulu, "Picosecond synchronization system for quantum networks," Journal of Lightwave Technology , 1–7 (2022).

See more publications and conference proceedings on google scholar.

Engineer, Basov Infrared Laboratory Dec 2013 – June 2017
University of California San Diego (lab since moved to Columbia University)

- Design of Terahertz optical system with parabolic mirrors using ZEMAX EE
- Conceptual design of new Cryogenic Infrared Atomic Force Microscope

SKILLS

- Full-stack web development with Typescript, Svelte, Tailwind, Fastapi, MongoDB, Docker, Rust & WebAssembly. CI/CD experience. AI-assisted workflows
- Proficient with Python, Numpy, PyTorch, C, Matlab, Wolfram Mathematica
- Proficient with Solidworks for research/prototyping, ZEMAX for optical design
- 3d and 2d Graphics, rendering. Creator of Nature cover artwork, and press-release artwork
